

ACKNOWLEDGEMENT

The completion of this research and the development of the Digital Document Management System would not have been possible without the help and support of many people. We would like to express our sincere gratitude to everyone who guided us throughout this journey.

First, we would like to thank our capstone project adviser, Ma'am Ellen Montesclaros-Guinares, for her patience, guidance, and valuable insights. Her support played an important role in improving both our documentation and system development.

We are also very thankful to the Ormoc City Youth Development Office (OCYDO), especially Ma'am Ana Marie Quisigan and the staff, for allowing us to conduct our study and for their continuous guidance and updates, which helped us stay on track.

We would also like to thank Sir Dunhill Mar Louise Leal and Ma'am Rina Marie Lucanas for their helpful feedback and assistance in revising our documents.

To our fellow group members, thank you for your hard work, cooperation, and dedication in completing this project. We are also grateful to our families and friends for their support, encouragement, and understanding throughout the process.

Above all, we thank the Almighty God for giving us strength, wisdom, and guidance in completing this endeavor.

ABSTRACT

This study focuses on the development and evaluation of SKActHub, a web-based document management and monitoring system designed for the Sangguniang Kabataan (SK) in selected barangays of Ormoc City. The system was created to improve the efficiency, organization, and accessibility of SK records by replacing traditional paper-based processes with a centralized digital platform. SKActHub includes key features such as document storage, categorization, and retrieval, along with role-based access for the SK Chairperson, Secretary, and Treasurer to ensure better control and security of information.

The system also includes an approval-based workflow to make sure that all uploaded documents are checked and validated before being stored. This helps reduce errors, avoid unauthorized changes, and promote transparency. In addition, the platform allows real-time tracking and monitoring of activities, making it easier for SK officials to manage reports, deadlines, and important documents. Overall, the system helps reduce data loss, avoid duplication, and improve daily operations.

To evaluate the system, a pre-survey was conducted with 40 respondents to understand the current challenges in document management, followed by a post-survey with 39 respondents to assess the system's usability, functionality, and performance. The results showed a high level of acceptance, with an average rating of 4.0 out of 5, indicating that users found the system helpful and easy to use.

The findings suggest that SKActHub is a reliable and user-friendly solution that can improve document management and monitoring in SK offices. It also shows how digital systems can help improve efficiency, transparency, and overall service delivery in youth organizations.
